## Foodology Factory

By Erik Bahnson

Today at the Foodology Factory, two experiments took place. The first experiment had the instructors shake heavy whipped cream in a small container, with the desired result of making butter. The second experiment involved mixing sugar and yeast into water, and pouring the mixture into a water bottle. The instructors then place a balloon over the lid of the bottle, which inflated with gas produced by the water mixture. After the first experiment was thoroughly shaken, the whipped cream butter was spread on saltine crackers and handed out to the children. I had a sample, so I can tell you first hand that the experiment was a success.
